

# 159.341 Programming Languages, Algorithms and Concurrency

## Assignment 1 - Marking Schedule

Component	Description	Marks
Parser	The parser should read input from the user and correctly parse the program/statements as defined by the language. Invalid statements should not be accepted by the parser.	3
Interpreter	The interpreter should execute the statements as they are read from input and correctly implement the behaviour of each command as described in the specification.	3
Error Handling	Invalid input should be detected and your submission should provide an error message and attempt to recover.	2
Miscellaneous	Remaining marks will be allocated at the marker's discretion.	2
